PROFILE

Recent BSc (Hons) Software Engineering graduate with experience in Python, JavaScript, and C, alongside building practical software solutions and working with APIs and databases. Experienced in developing applications and collaborating directly with clients as a freelance developer. Interested in systems where software interacts with hardware and seeking a graduate engineering role to further develop my programming and systems engineering skills.

SKILLS

Languages:

- Python
- JavaScript
- C

Databases:

- PostgreSQL
- MySQL

Frameworks & Web Technologies:

- React.js
- Node.js
- HTML5
- Tailwind CSS

Tools & Practices:

- Git/GitHub
- REST API integration
- Debugging

PROJECTS

Game Price Tracker & Comparison System

Python (FastAPI, PostgreSQL)

- Developed a **full-stack** Python web application that tracks video game prices over time and compares prices across multiple online retailers.
- Integrated **Steam API** and custom web scraping for Loaded (formerly CD keys) to aggregate pricing data.
- Designed a relational database using **PostgreSQL** to store tracked games and historical price data, enabling time-based analysis of price changes.
- Implemented automated background jobs using **APScheduler** to periodically re-check prices and build a continuous price history.
- Built a web interface using **FastAPI** and Jinja templates, allowing users to search for games, track them, and view real-time price comparisons.

Personal Portfolio Website

Javascript (React, Tailwind CSS)

- Developed a responsive personal portfolio website using **React**, **Tailwind CSS**, and modern component-based design.
- Implemented reusable components and structured project data to allow scalable content updates.
- Added **Framer Motion animations** for smooth page transitions and enhanced user experience.
- Built interactive UI elements including a technology carousel and project showcase grid.
- Designed the site to be **fully responsive** and optimised for different screen sizes.

Sorting Algorithm Visualisation Tool

Python (Matplotlib, NumPy)

- Designed and implemented a **Python** application that visualises the execution of multiple sorting algorithms through real-time animated bar charts.
- Implemented core algorithms including **Bubble Sort**, **Insertion Sort**, **Selection Sort**, **Merge Sort**, and **Quick Sort** to demonstrate differences in sorting strategies and efficiency.
- Built interactive visualisations using **Matplotlib**, highlighting element comparisons and swaps during execution.
- Added performance tracking including operation counts and execution timing to analyse algorithm performance.

Geographic Distance Calculator

Python (Geopy)

- Built a **Python** tool that calculates the geographic distance between two locations using real-world coordinate data.
- Integrated the **Geopy geocoding service** to convert location names into latitude and longitude coordinates.
- Implemented the **Haversine formula** to compute great-circle distances between points on the Earth's surface.

PROFESSIONAL EXPERIENCE

Freelance Web Developer

- Developing responsive websites and web applications for local businesses.
- Building full-stack solutions using React.js, Node.js, Tailwind CSS, and PostgreSQL.
- Integrating third-party APIs and backend services.
- Managing projects independently from concept to delivery.

2025 – Present

Team Member
Home Bargains

- Delivering customer service in a fast-paced retail environment.
- Communicating effectively with customers and team members.
- Maintaining store standards and assisting with operational tasks.

2021 – Present

EDUCATION

BSc (Hons) Software Engineering
Anglia Ruskin University

2022 – 2025

BTEC Level 3 Business Studies (Distinction *)
Haverhill Community Sixth Form

2019 – 2021

INTERESTS

Screenwriting | Game Development | Music Production | Gaming
